

We made the top navbar and the side navbar together since it was going to exist in all of the pages. After that, Nick worked on the Main-Feed page, Josh worked on the Job-Board page, Ryan M. worked on the Profile page, Thomas worked on the Project page, Caroline worked on the Inbox page, and Ryan L. worked on the Create-Project page. Each member contributed to the making of the submission document.

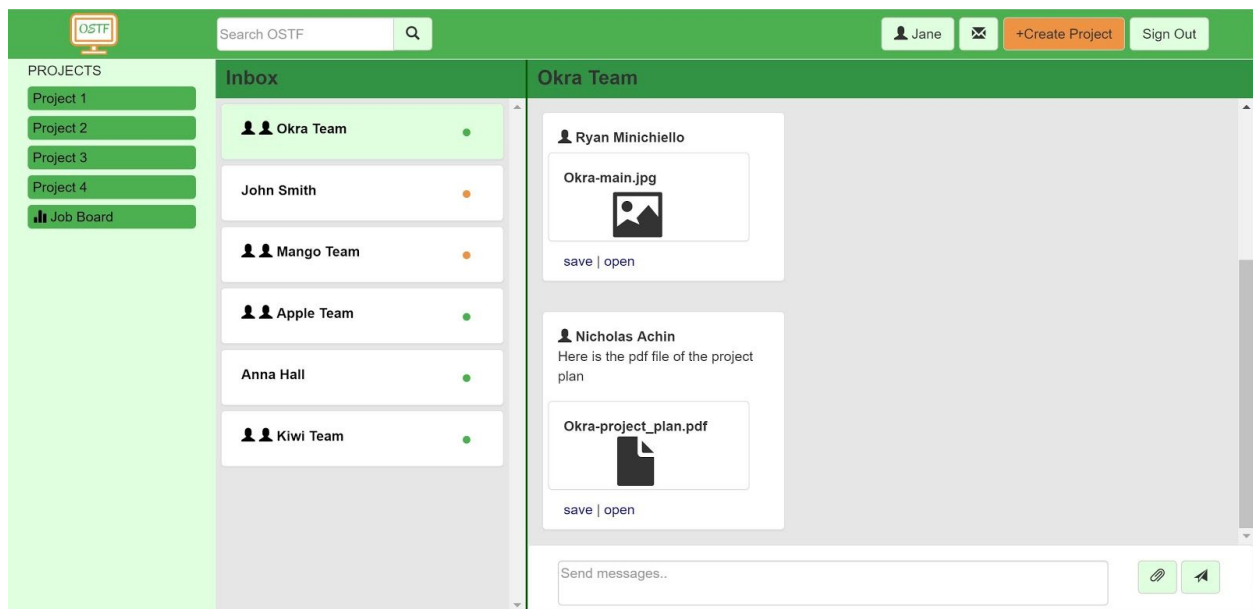

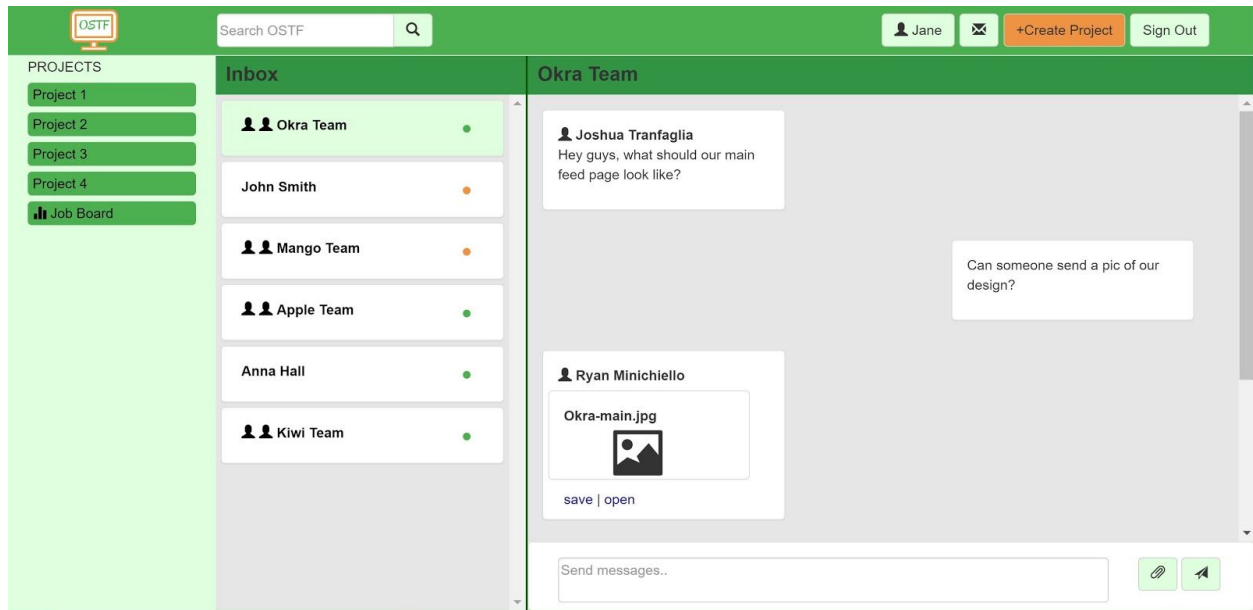

Screen 01: This is *OSTF*'s main feed and what the user sees when they initially log in or navigate with the OSTF button in the top left-hand corner. The user can scroll down the feed to see notifications from Recommended Jobs, My Projects, and projected Followed By Me. (main-feed.html)

Screen 02: The behavior of the main feed when the Recommended Jobs tag is unchecked. Only checked filters are displayed the feed. (main-feed-without-one-filter.html)

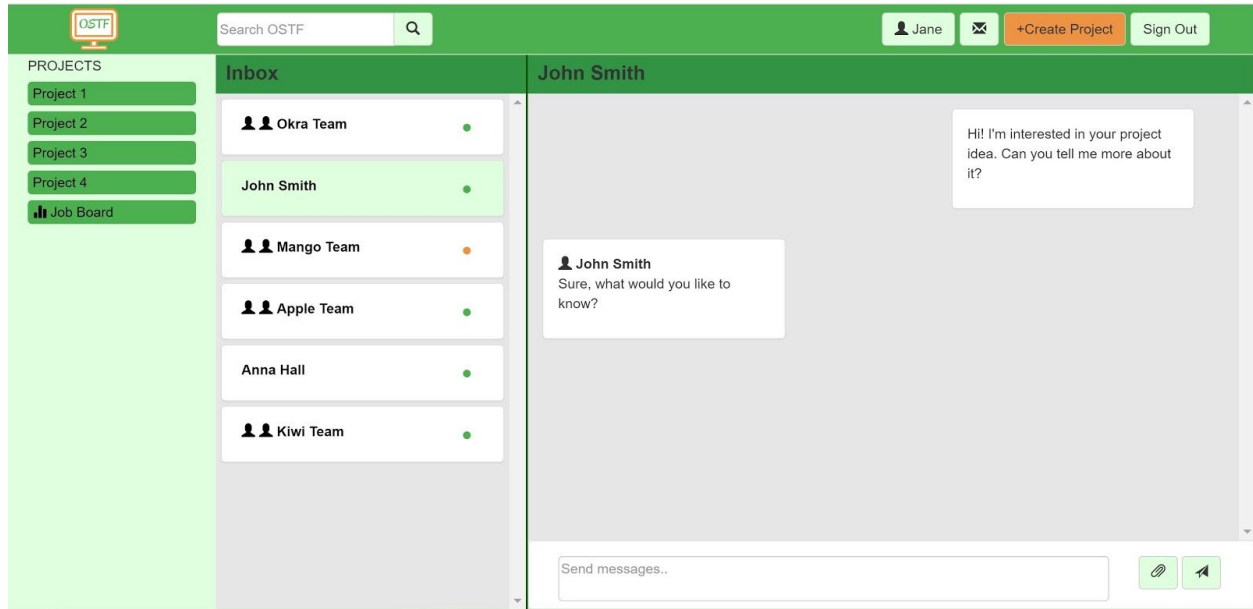

Screen 03: When clicking on the Inbox button on top right side of the page, the user is taken to the Inbox page. (inbox.html)

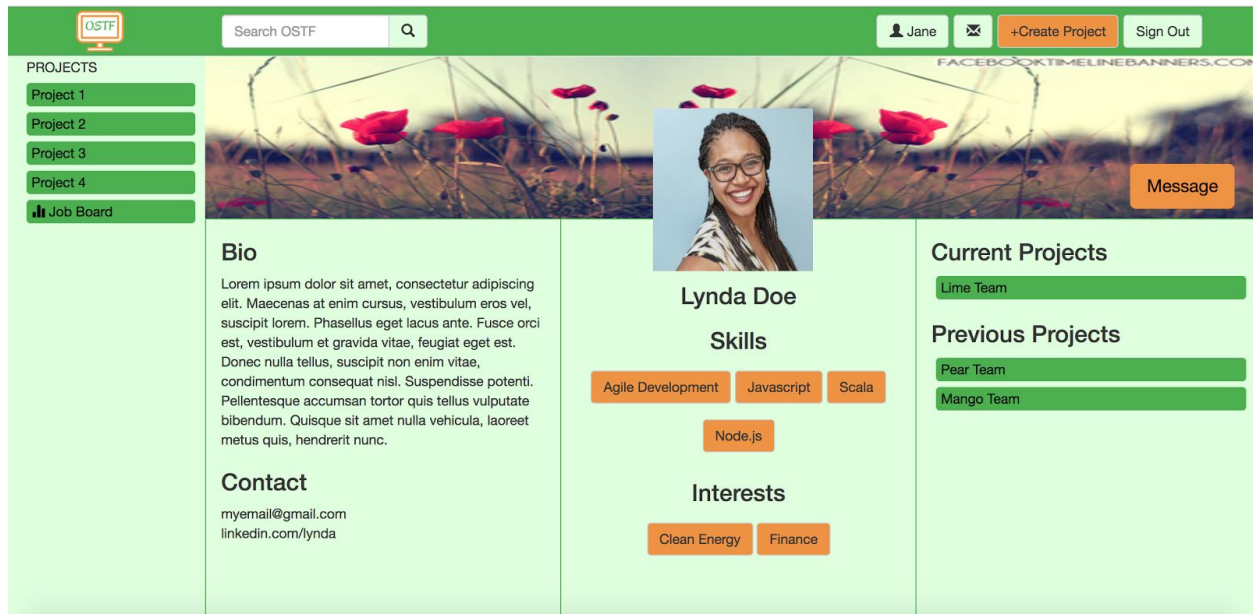

The Inbox page is where the user can chat with either the individuals or the project group. Different chat pages can be navigated to by clicking on one of the panels in the Inbox column. The user can send and receive messages and files. Files can be sent by using the paperclip button, and regular messages can be sent by clicking the send button. The received files can be saved or opened by clicking either one right below the attachment. Scrolling down will show the user the most recent messages and scrolling up will show the user older messages.

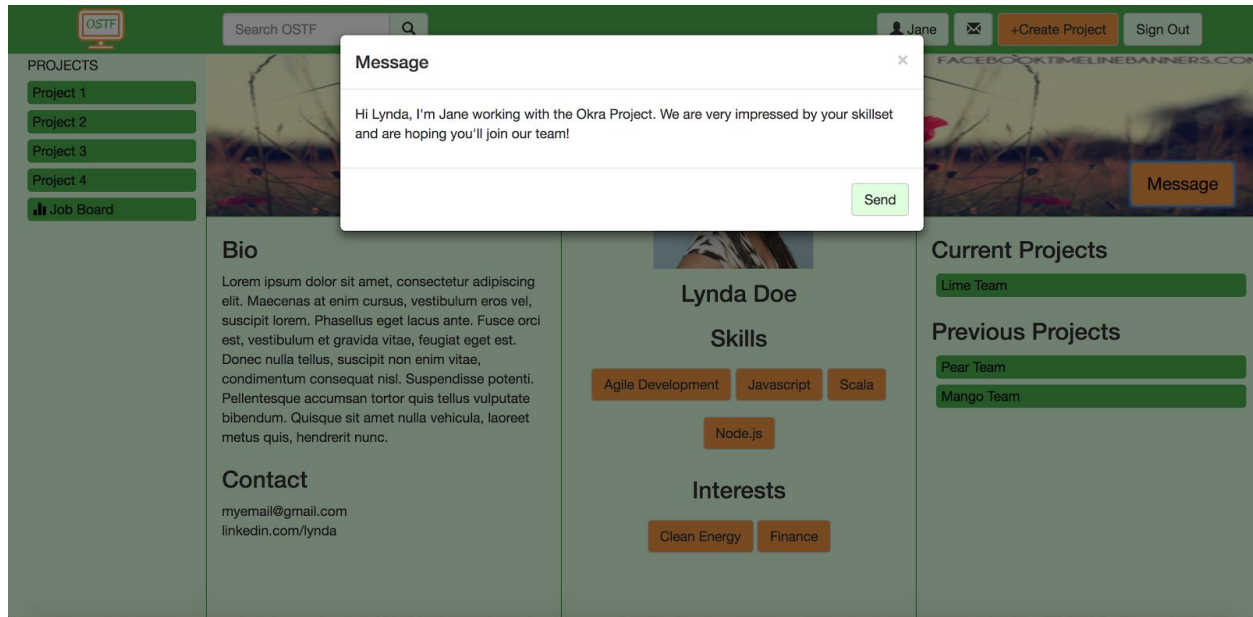

Screen 04: The orange circle next to the team or individual's name indicates that the message has not been viewed yet. And the green circle indicates that the user have read the messages. (inbox2.html)

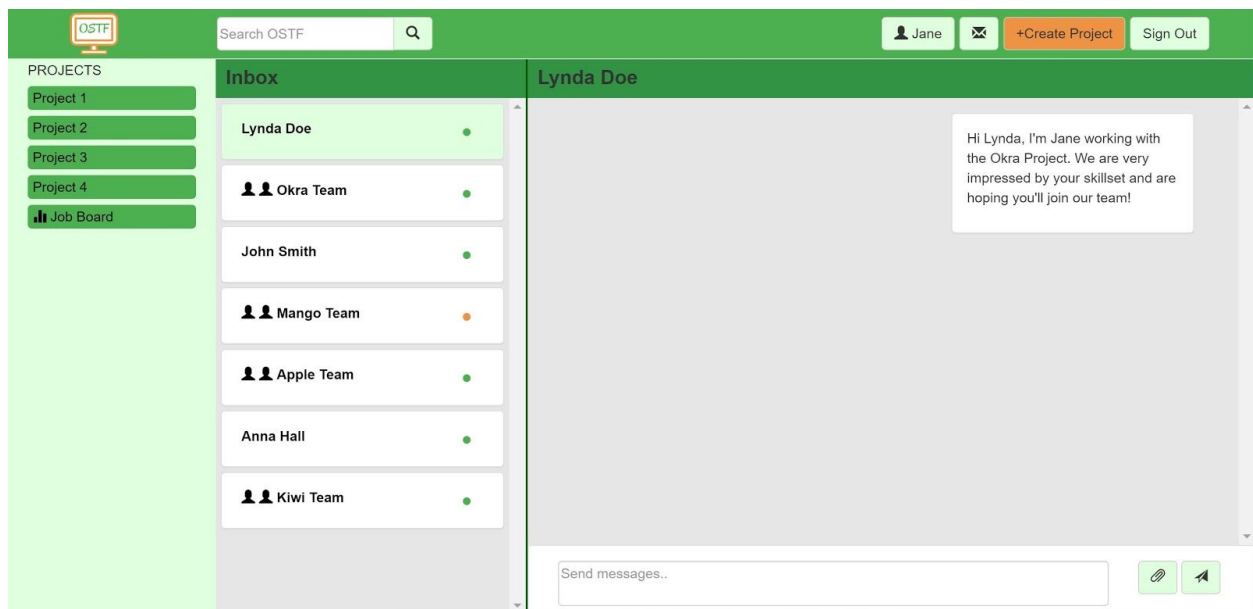

Screen 05: The user's profile page is navigated to by clicking the user's name button in the top navigation bar. (profile_temp_nomsg.html)

Screen 06: On another individual's profile page, clicking the 'Message' button in the profile banner will prompt the user to type a message to the user's profile they're looking at. Clicking send will close the box, and navigate the user to the Inbox page. (profile_temp.html)

Screen 07: Clicking that send button creates a new chat and the user gets navigated to the Inbox page. (inbox3.html)

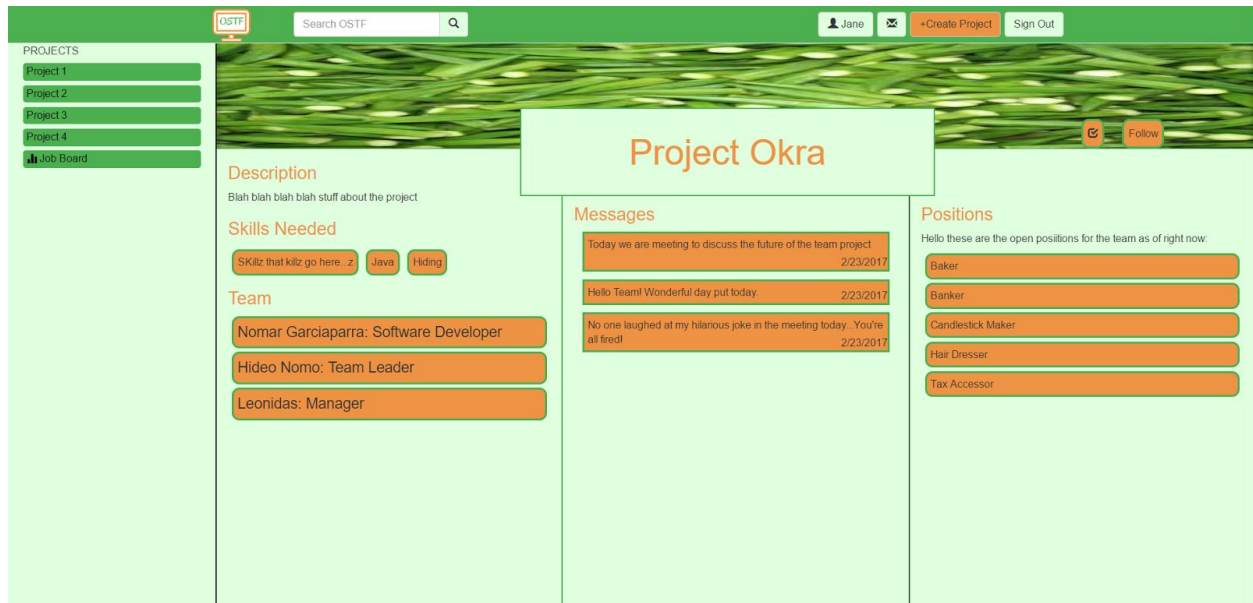

Screen 08: When the user clicks on the orange ‘+Create Project’ button in the navigation bar, the user will be brought to the Create Project page. Here, the user can enter in information about a project they wish to start, including required positions and tags to help other users find the project. (createproj.html)

The 'Create Project' page features a sidebar with project links and a main form area. The form includes fields for Project Name, Description, Areas of Interest (5 Max), Positions, Start Date, End Date, and an 'In Progress' checkbox. A large 'Create' button is located at the bottom right of the form.

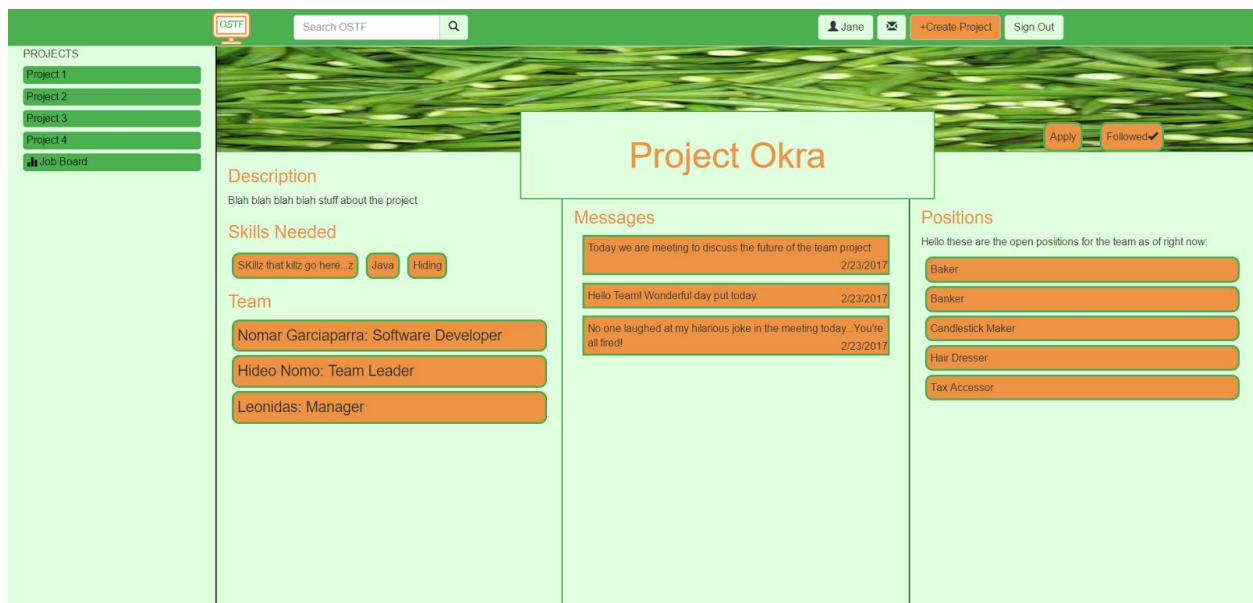

Screen 09: Clicking the project name on the sidebar or clicking the project item in a search will bring you to the project page. This page holds a project description and important project information, project related messages and notifications, and the list of open positions for the project. (project-page.html)

The 'Project Okra' page displays project details and related information. It includes sections for Description, Skills Needed, Team, Messages, and Positions. The 'Positions' section lists open roles: Baker, Banker, Candlestick Maker, Hair Dresser, and Tax Accessor.

Screen 10: When the apply button is clicked the user's profile is linked to the open positions for the project. The applied button is then changed to a check mark for that project. (project-page-applied.html)

Screen 11: When the follow button is clicked the user's profile will be sent new messages/notifications concerning the project, the user will be able to view the progress of the project on their main feed, and the button will change to indicate that the user is following this page. (project-page-followed.html)

Screen 12: When the “Job Board” button on the side navigation panel is clicked, or when the user types in a keyword in the search bar, the user is taken to the Job Board page. Here, a list of open positions from various projects are listed, each with a project name, position title, and a description of the project and what the position entails. If the user searched using a keyword, a filter for that keyword is automatically applied to the results. Each position on the job board is given a ranking based on similar or shared skills and interests between the user and the position, making it easy to find jobs that suit the user, or a given criteria. When the user clicks on the project panel, it navigates them to the project page (example: Screen09). (ostf-job-board.html)
